

Minutes of the meeting of NRWG on September 11, 2007.

The meeting was called to order by Jim Palakovich at the Bozeman High School shop. There were approximately 25 in attendance. There were three guests.

The topic of the business meeting was informal discussions of the presentations at this summer's Provo and AAW conferences. As usual, everyone who had attended these meetings had high praise for the conferences. Several discussions were held on the various presenters.

It was noted that during the summer, Tony has been teaching several members at his shop on a weekly basis.

The monthly raffle was held for a \$30 gift certificate from Choice Woods. It was won by John Morrison.

John Morrison was this meeting's presenter. He presented a demonstration of routing surfaces to accept inlays. He showed the process of creating a template for the inlay and then using that template to make another template that is used to route the void into which the inlay will be inset. The most critical point of the inlay process is the calculation of which size bit to use with which guide bushing to provide the proper offset during the different processes. John provided copies of a table that he has created that helps you determine the proper pairing for your project.
